                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ă
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pp
                                                                            The invention relates to methods for producing catalytic antibodies displayed on a phage. The method comprises: (a) generating a gene library of antibody-derived domains; (b) inserting coding for the domains into a phage expression vector; and (c) isolating the catalytic antibodies. The phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The catalytic antibodies can be isolated by preparing an antigen; optionally immunising an animal with the antigen; generating a antibodies; selecting phage expression vector to generate phage display antibodies; selecting phage display antibodies which bind specifically cot the antigen; screening the selected phage display antibodies; selecting phage display antibodies which bind specifically catalytic activity to substrate; and isolating the catalytic antibodies; where the phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The processes are used to produce catalytic antibodies, which can be used for in vivo activation of a prodrug. The present sequence represents a genetic sequence of light chain pCR pattern C from mouse derived RT3 phage antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mouse derived RT3 phage antibody light chain pattern A genetic sequence.

The invention relates to methods for producing catalytic antibodies
displayed on a phage. The method comprises: (a) generating a gene library
of antibody-derived domains; (b) inserting coding for the domains into a
phage expression vector; and (c) isolating the catalytic antibodies. The
phage expression vector incorporates a histidine peptide in tandem with a
comprehence, performing an animal with the antigen; generating an
antigen; optionally immunising an animal with the antigen; generating a
cand VL domains from the immunised animal; cloning the VH
completes; selecting phage display antibodies which bind specifically
cantibodies; selecting phage display antibodies which bind specifically
contact the phage expression vector incorporates a histidine peptide in
tandem with a myc peptide. The processes are used to produce catalytic
antibodies, which can be used for in vivo activation of a prodrug. The
present sequence represents a genetic sequence of light chain pattern A
crossent sequence represents a genetic sequence of light chain pattern A

                                                                                                                                                                                                                              ö
        antigen antibody type reactions, at least 1 epitope of a pathogenic virus having tropism for the mucosa. AAW70905-16 and AAW70929-46 are analogous to CDR regions of monoclonal antibodies specific for RSV. AAW70917-28 are analogous to CDR regions of monoclonal antibodies specific for site III or IV of the VP6 protein of rota virus (RV). The peptides can neutralise viral infections and may also inhibit fusion between infected and uninfected calls or calls and viruses. They provide passive or active uninfected and transcription of the virus, so are useful as antiviral agents or for prophylaxis, in human or veterinary medicine. The peptides can be labelled and used to diagnose infection or contamination by the virus. The peptides are particularly directed against RSV or RS but may also be used against papilloma, adeno, entero, polio, influenza or immune deficiency viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a monoclonal antibody (MAb) (I) that binds to a human breast cancer antigen that is also bound by MAb 454Cll and 520Cg (produced hybridoma ATCC HB8484 and HB8656, respectively). Also described is a hybridoma that produces (I). (I) is useful in specific binding assays, affinity purification, drug or toxin targeting, imaging,

The DNA encoding the chain was amplified from a cDNA library prepditom the spleen of an unimmunised mouse. The corresponding heavy chain was also amplified from an existing construct, pSWI-VHDI.3 (Ward et al., 1989). The two fragments were assembled via a linker to prepare an scFv construct which was ligated into the fdCAT2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fd; bacteriophage; gene III; filamentous; phagemid; capsid; coat; pilus; g3p; binding; adsorption; gene VIII; diverse repertoire; specific binding pairs; replicable genetic display package.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q
                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              light chain variable region (VL) encoded by cDNA derived from hybridoma 4155-24. The nucleofide sequence is used in the production of recombinant monoclonal antibody #125-24mAb, which is capable of neutralising biological activities of interleukin-18. The antibody has antialized antiantenatory, immunosuppressive, leucocytopoletic, antipyretic, antialiary and hepatotropic activity and can be used for prevention and treatment of autoimmune diseases, immunopathies and inflammatory
                                                                                                                                                                                                                                                                                                                                                                     Anti-Interleukin-18 antibody; IL-18; light chain variable region; VL; hybridoma #125-2H; mouse; monoclonal antibody #125-2HmAb; interleukin-18; antiinflammatory; immunosuppressive; leucocytopotetic; antialgic; antipyretic; antiallergic; hepatotropic; treatment; autoimmune disease; immunopathy; inflammatory disorder; immunoreaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New artificially produced peptide for neutralizing biological activity of interleukin-18, useful for treating and preventing immunopathies, inflammatory disorders and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     present protein sequence is the mouse anti-Interleukin-18 antibody
                                                                                                                                                               Gaps
vector for expression on the surface of fd bacteriophage. In this way, the VL domain was replaced by a library of VL domains to allow for selection of a broader range of antibody specificities. Several clones were isolated which bound to TEL (the parent antibody DI.3 binds exclusively to HEL). The sequences of the light chains of two of these clones, MRI and MRI are given in AAR21310 and AAR21311 see also AAR21260-307, 309-312, AAR22450, AAR22565, AAR22567-81.

The variable regions of the antibodies are useful against HBV S-surface antigens, e.g. adr, adw, ayr or ayw, particularly for neutralising or removing HBV. They may also be employed to treat or prevent HBV infection. The present sequence is Escherichia coll light

Sequence 2, Application US/09990205

Patent No. US20020150572A1

GENERAL INFORMATION:

APPLICANT: FOON, Kenneth A.

APPLICANT: FOON, Kenneth A.

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR THE TREATMENT OF PSORIASIS

FILE REFERENCE: 304142000501

CURRENT APPLICATION NUMBER: US/09/990, 205

CURRENT FILING DATE: 1998-11-16

PRIOR FILING DATE: 1998-11-16

PRIOR FILING DATE: 1998-11-16

PRIOR FILING DATE: 1998-11-17

NUMBER OF SEQ ID NOS: 5

SOSTWARE: PATENTIN VOR: 2.00
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Foon, Kenneth A.
Chatterjee, Sunil K.
TITLE OF INVENTION: MONOCLONAL ANTIBODY 1A7 AND USE FOR THE
TREATMENT OF MELANOMA AND SMALL CELL CARCINOMA
NUMBER OF SEQUENCES: 66
                                                                                                                                                                         Length 130;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 149;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      COMPUTER: IBM PC Compatible

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
